

July 20, 2009

Mr. John Kodi  
Kodi Klip Corporation  
314 South Cumberland Street  
Lebanon, Tennessee 37087

Dear Mr. Kodi;

Enviroplas' proprietary formulation of ENV14-A1514R-1000 for Kodi Klip™ is made with recycled materials packaged in recycled cardboard boxes.

For more information on Enviroplas' environmentally-friendly and recycled products, please contact Enviroplas at (812) 868-0808 or [info@enviroplas.com](mailto:info@enviroplas.com).

Sincerely;

A handwritten signature in black ink that reads "Keith A. Dame".

Keith Dame  
Enviroplas, Inc.

Enviro – it's not just our name; it's our focus every day.

Enviroplas, Inc.® is a manufacturer of environmentally-friendly plastic who cares about the planet. We are constantly seeking more effective ways to prevent waste, prevent pollution, conserve resources, and foster environmental consciousness in our people every day.

Below are some of our efforts we have taken toward a more sustainable future.

#### Products made with Salvaged and Recycled Content

- Our environmentally-friendly plastic like the plastic used in **Kodi Klip™** reduces landfill wastes by using either or both post-consumer and post-industrial materials.
- Our environmentally-friendly plastic is packaged in recycled cardboard boxes.
- At **Enviroplas** any cardboard not re-used is sent out for recycling. It does not go into the trash bin.
- Any damaged or unusable pallets/skids are also sent out for recycling. They do not go into the trash bin.

#### Resource Efficient Manufacturing Process

We produce plastic through manufacturing processes that minimize energy consumption and produce minimal waste and reuse any waste or scrap.

- Water used in the manufacturing process for cooling and temperature control is a closed loop cycle that re-uses the water rather than introducing new water.
- We utilize energy efficient lighting throughout the entire warehouse and plant facilities that use 1/3 less energy than standard lighting systems.
- We utilize electric powered forklifts where viable to decrease the usage of gasoline.
- We recycle 100% of any plastic scrap that comes from our manufacturing processes.

#### Green Office and Green Employees

Our employees are involved in our environmentally-friendly processes and have initiated the following green efforts:

- We use reusable UPS envelopes and reuse sample boxes and UPS envelopes we receive.
- We purchase and use recycled office paper as well as recycled printer cartridges for all of our copiers and printers.
- Introduced this year, we email our invoicing to customers rather than use paper to send by mail.
- We encourage communication by email and to read them onscreen rather than printing them.
- Faxes are sent directly from our computers to eliminate unnecessary printing.
- In an effort to decrease what gets in the landfill, we stopped the use of a filtered water service that uses the large plastic water jugs and installed a water filter at the tap.
- Soda cans used by employees are recycled and the money from the recycled cans is given back to the employees in the form of reloadable gift cards.

While recycling is the first thing that comes to mind when we think of being environmentally-friendly, it is only part of the environmentally-friendly business equation. At **Enviroplas, Inc.®** we have taken large steps toward producing environmentally-friendly products with an environmental consciousness workforce in an environmentally-friendly business operation.
