Dear David

It is with pleasure that I recommend the KODI KLIP® Rebar Fastening System.

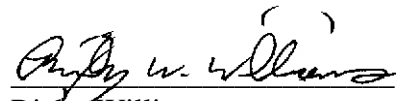

We used KODI KLIPS on a job that involved the assembly of 254 precast concrete piles 28' L X 10" D. The K-KLIPS were used to attach #4 rebar rings to #6 rebar and required approximately 60,000 connections.

Although this was the first time we had used the KODI System, our employees quickly learned to master the easy-to-use KLIPPER GUN, and were excited about how easy, safe, and fast it was compared to manual rebar tying.

We were pleasantly surprised that, as promised, the K-KLIPS held the piles together so rigidly that we were able to pick them up with a forklift and transport them to storage without the usual racking and subsequent reconnecting work.

The KODI KLIP System was instrumental in enabling us to bring the job in under budget and three days ahead of schedule. We'll be using the KODI KLIP System whenever we want faster, better, safer rebar fastening.

Sincerely

Ricky Williams
Owner/Treasurer
