Dear Mr. Jones;

The West Virginia Division of Highways, Materials Control, Soils and Testing Division has evaluated your submittal of the subject material per Materials Procedure (MP) 106.00.02. Your product has been granted a Materials Division provisional approval which will still require your product to be inspected and approved for acceptance on a per project basis under WVDOH Specification 602.6 and 602.7. To get your product to be continuously incorporated into a WVDOH project(s) will require you to promote your product throughout our various Divisions, which you may already be doing. The more your product gets incorporated into WVDOH projects, the more historical records are created, which eventually may require a WVDOH specification addition or revision. At this time, we request that you maintain written records of all use of the subject product on WVDOH projects.

Please feel free to use this provisional Materials Division approval for your promotional needs.

Thank you for your interest in providing the WVDOH with a new technology/product. If you have any further questions, please feel free to contact me at (304) 558-9882.
