

BRADLEY TANK & PRECAST

Mr David McKinney
Product Group Manager
KODI KLIP Corporation
314 S Cumberland St
Lebanon, TN 37087

Dear David

We had an opportunity to really put the KODI KLIP Rebar Fastening System through its paces, and I'm pleased to report it met our expectations – and then some.

As you know, we recently introduced traffic-rated septic tanks to our product line and our tanks have received tremendous market acceptance. Sales of the new 2000 gal and 2500 gal tanks have exceeded expectations and we needed to find ways to speed-up production or risk missing deadlines.

Just as AIRMATIC promised, when we introduced the KODI KLIP System as a replacement for manual rebar ties we saw an incredible increase in both the speed and quality of our rebar work.

Our workers were able to quickly master the KTA-4 and KTA-5 Klipper Guns and were actually excited about how much easier, safer and faster the KODI System is compared to manually tying 4 x 5 and 5 x 5 rebar.

It's not often that a product meets, let alone exceeds, the claims it makes, but the KODI KLIP System does just that. We'll be using Klips whenever we need to connect rebar.

Sincerely

Richard Butler
President
